

Transforming Quality Control : COA processing with Abbyy Vantage

Tata Consultancy Services
June 2025

COA Document processing

What is it?

COA is a document that verifies a product's quality and composition based on laboratory testing. It confirms that the product meets specific quality standards and often includes details about its purity, chemical composition, and safety.

Challenges

- Manual collection of COAs from various sources (email, FTP, scanned documents)
- Time-consuming data extraction from unstructured PDFs and scanned images
- Error-prone transcription of critical test results and specifications
- Delayed quality decisions due to bottlenecks in data validation
- Lack of integration with enterprise systems (ERP, QMS, analytics platforms)

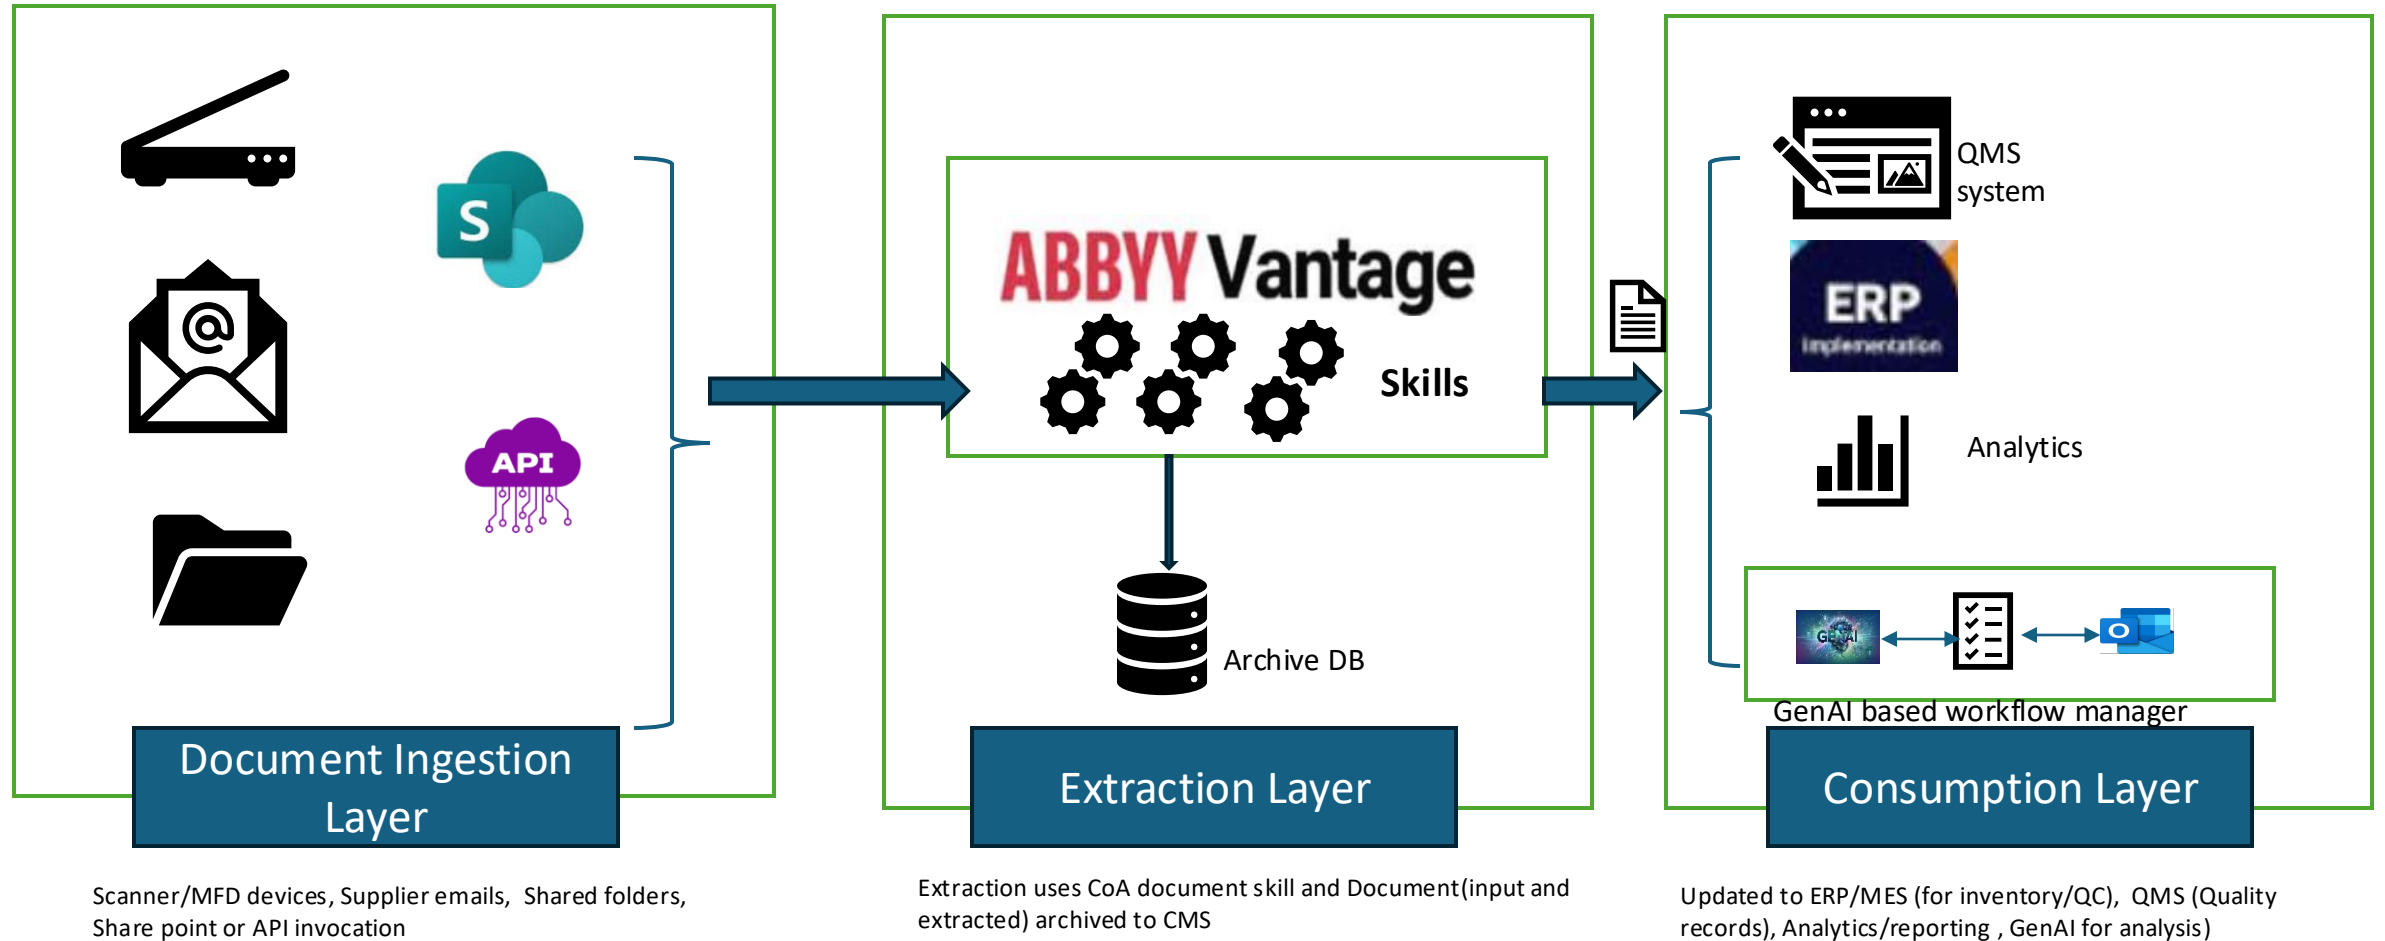

Incorrect processing may lead to

product recall

reputation/ brand
damage

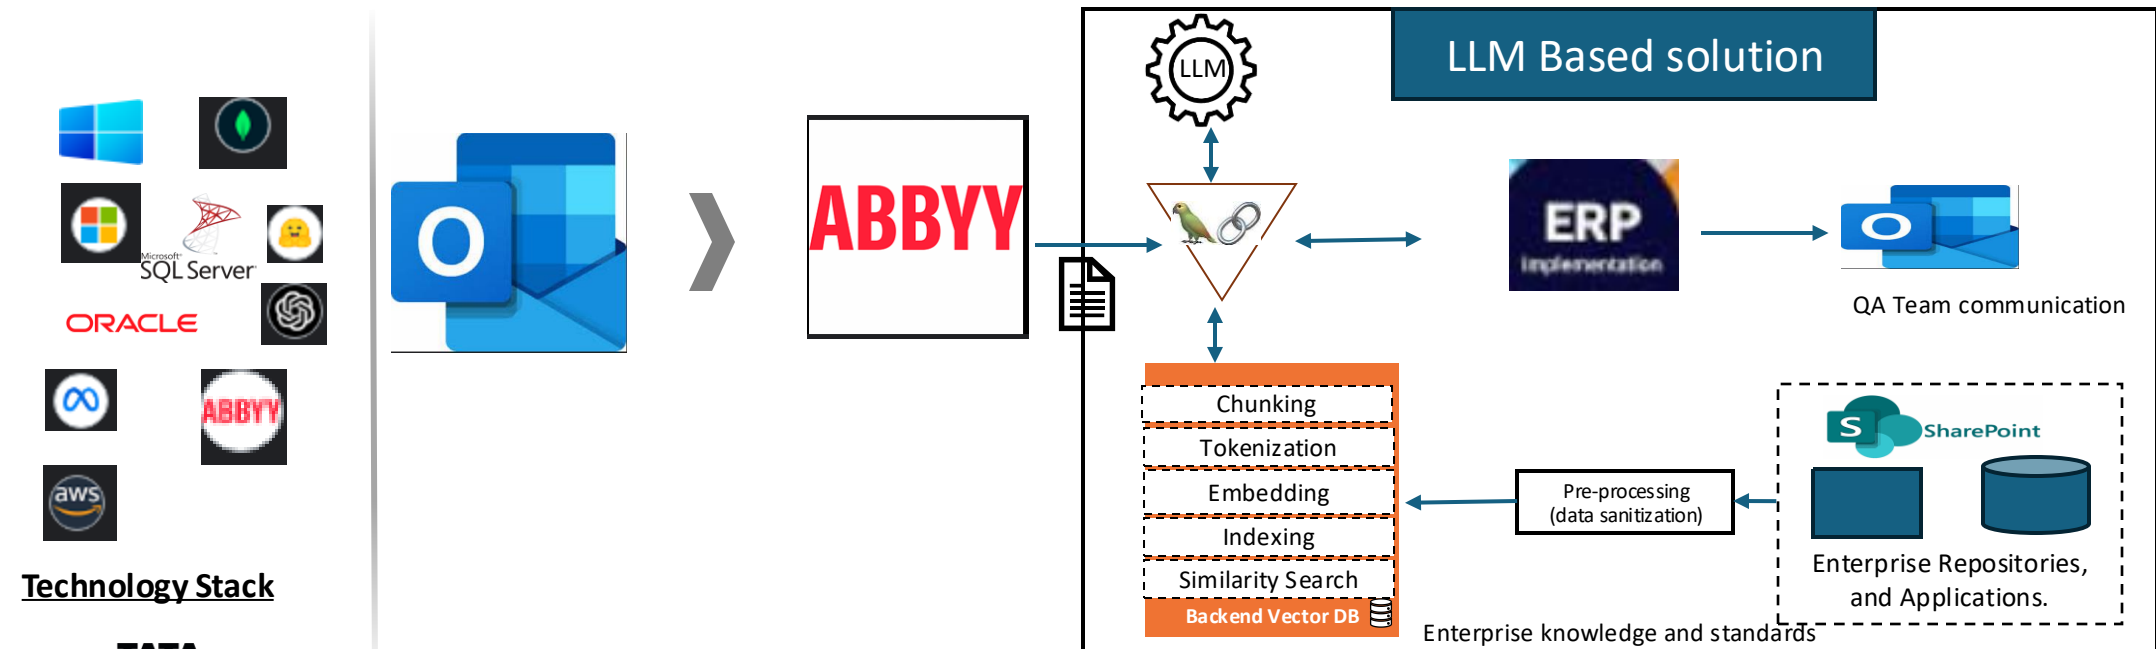

penalties and regulatory
actions

Solution Approach

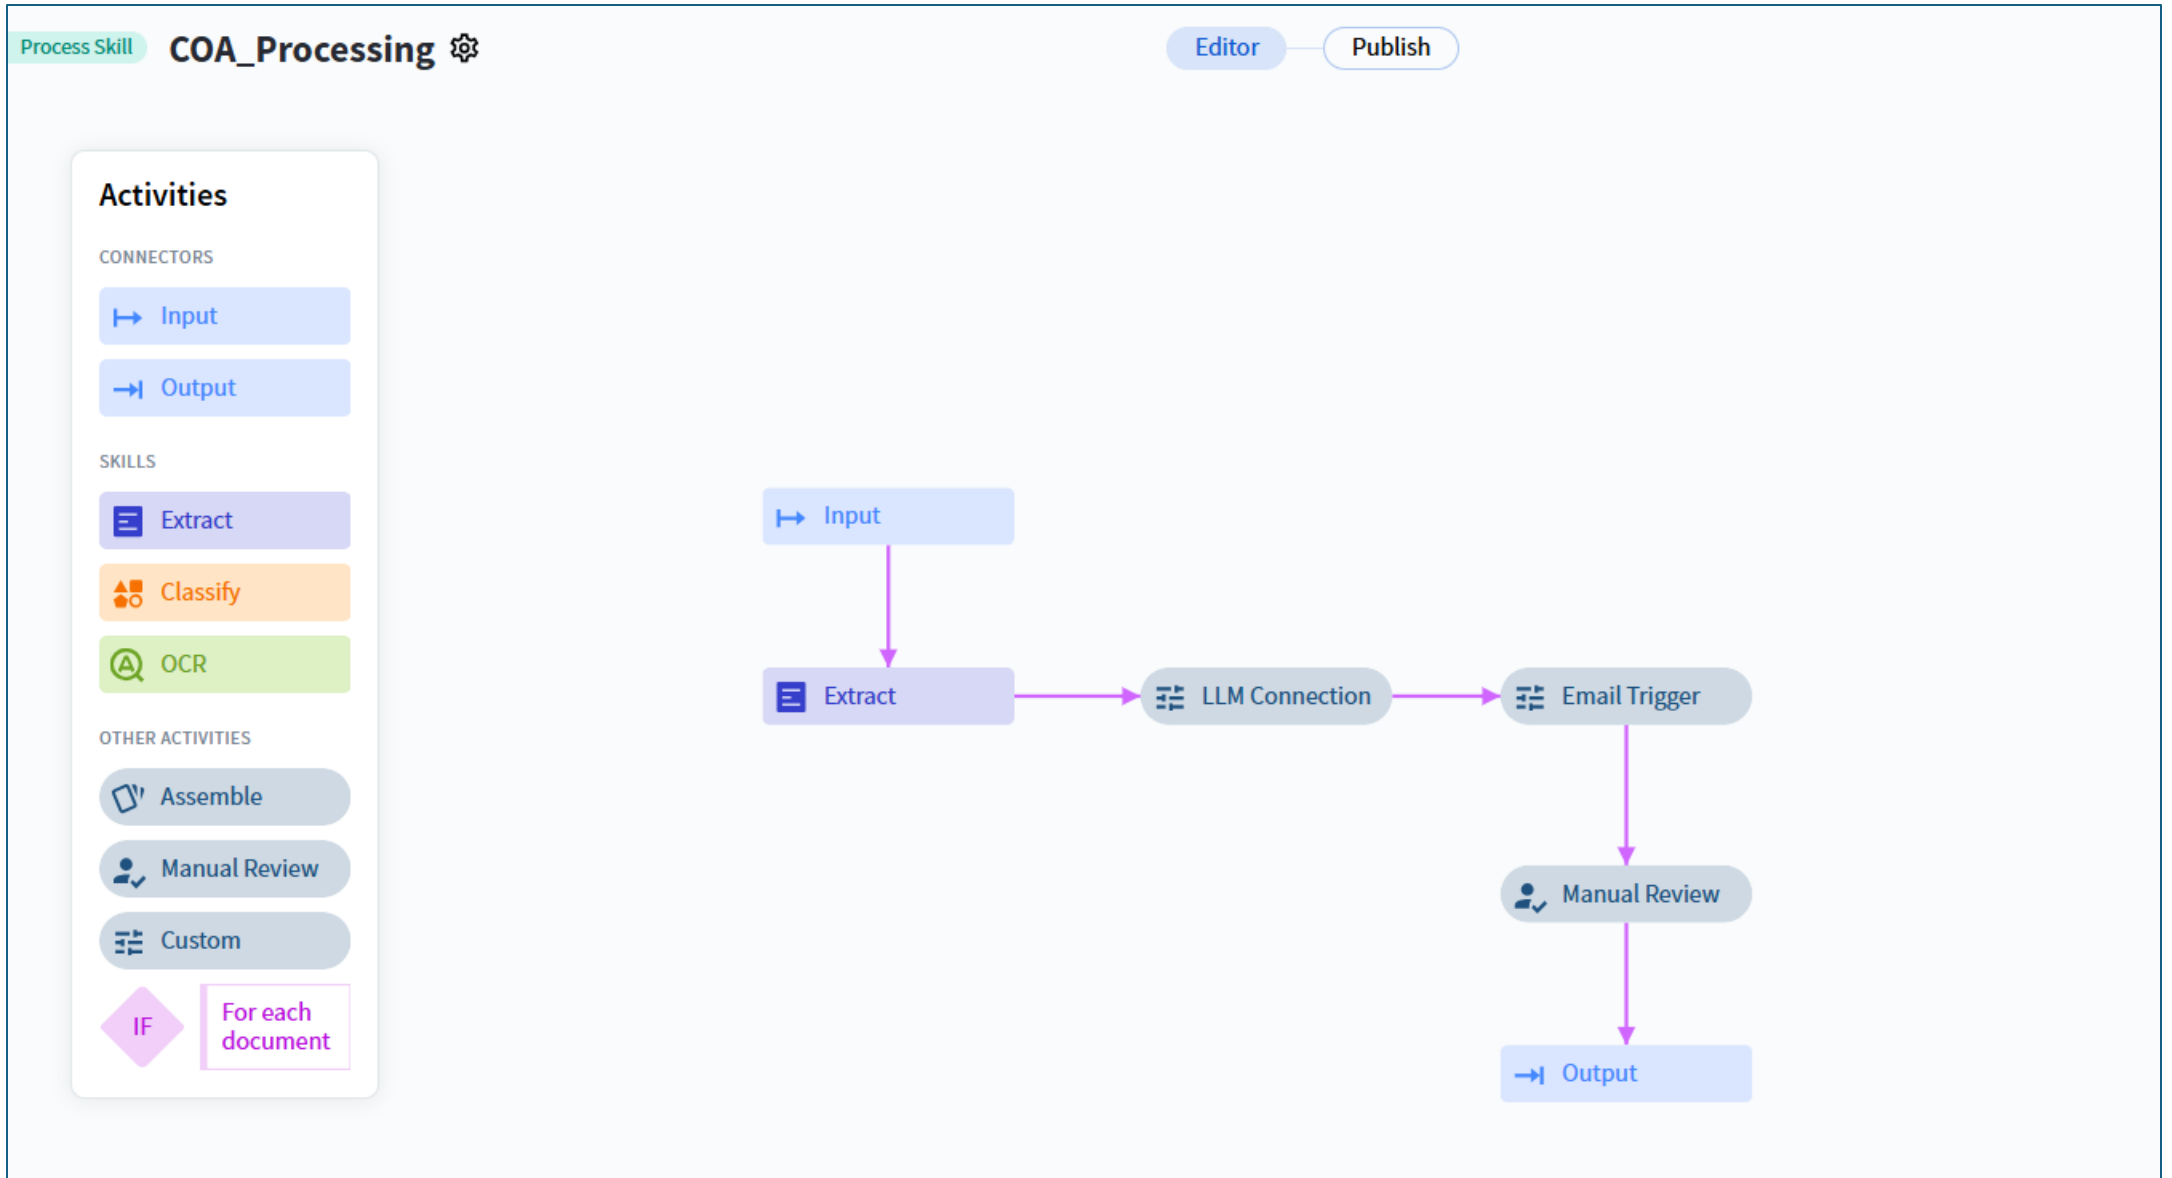

Downstream processing using LLMs

- Once ABBYY Vantage outputs the structured COA data, the next step is to determine whether the product passes or fails the quality requirements – and if it fails, to articulate the reasons. Traditionally, a quality engineer would compare each test result against acceptable ranges and then decide if the batch meets all criteria. Here, we automate that cognitive step using a Generative AI (GenAI) platform
- After the GenAI service determines the quality status, the solution moves to notifying the relevant parties and documenting the outcomes. This involves composing a structured email report (or potentially other forms of alert) and sending it to the appropriate stakeholders (e.g., the Quality Control team, Production managers, Procurement, etc., depending on the use case).

Gulf Food Industries
Dubai, UAE

Supplier Name & Location: Gulf Food Industries, Al Quoz Industrial Area, Dubai, UAE

Bill of Lading Number: BOL-789456

Ingredient Name: Date Cookies

DP-250gPremium

Purchase Order Number: PO-45892

Date of Shipment: January 30, 2025

Lot Number: 250125-DP-UAE

Certificate of Analysis

Analytical Data for This Shipment

| Attribute | Method Reference | Specification | Test Results |
|------------|------------------|---------------|--------------|
| % Moisture | A.O.A.C. 925.30 | 4% maximum | 5.0 |
| Protein | A.O.A.C. 17.008 | 15% minimum | 16.0 |
| Sugar | A.O.A.C. 925-32 | 10% Maximum | 9.0 |
| % Fat | A.O.A.C. 17.008 | 10% maximum | 14.0 |

Microbiological Data

| Test | Method Reference | Specification | Test Results |
|----------------------|------------------------|---------------|--------------|
| Standard Plate Count | B.A.M. 7th Edition/FDA | 10,000 | 10 cfu/g |
| Salmonella | B.A.M. 7th Edition/FDA | Negative | Positive |

Comments

This item is regularly tested by the manufacture appropriate current ingredient specification. As content of 5.0%, exceeding the maximum limit requirement of 15%, while the sugar content is of 10%. The fat content is 14.0%, exceeding the expected microbial limits. However, the presen with the required negative result.
