

Match UI for Vantage

Enhanced Data Matching Interface for ABBYY Vantage Web UI

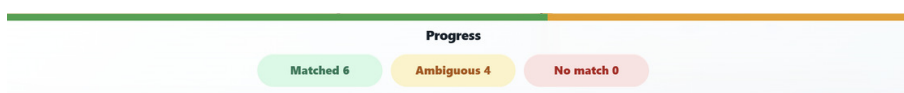

Customer Challenge

- ▶ **Extraction is Solved** with ABBYY Vantage, but the next challenge is to reconcile that data against external sources.

Match Engine API operates seamlessly within Custom Activities, while the Match UI complements ABBYY Vantage by enabling dynamic interaction with diverse data models.

Enhancing ABBYY Vantage

- ▶ Match UI delivers a dynamic interface optimised for operator data matching. Human reviewers are presented with clear progress indication and match candidates are shown in score order for maximum efficiency..

Paired with Match Proxy, Match UI and ABBYY Vantage Custom Activities can directly access data from external systems.

Match Proxy pre-filters, i.e. only data related to the current document, is able to deliver milliseconds response across datasets with millions of lines.
