Introduction

About This Document

This document describes changes made for ABBYY FlexiCapture 12 Release 1 Patch 3.

About the Product

ABBYY FlexiCapture 12 is a new version of the FlexiCapture product whose main goal is to provide a stable and scalable Data Capture platform, which can serve as a basis for creating regional and vertical solutions.

About the Patch

The patch is released to update Reports on the Administration and Monitoring console, new methods in scripts and fix the issues described below. It can be installed as a separate distributive kit or on top of FlexiCapture 12 Release 1 (build 12.0.1.263) and all previous patches: Release 1 Patch 1 (12.0.1.267) and Release 1 Patch 2 (12.0.1.282).

Technical Information

Release	Part #	Build #	OCRT build #	Release date
Release 1 Patch 3	1299/15	12.0.1.292	15.0.1.230	2017.08.18
Release 1 Patch 2	1299/14	12.0.1.282	15.0.1.230	2017.07.19
Release 1 Patch 1	1299/13	12.0.1.267	15.0.1.224	2017.05.23
Release 1	1299/12	12.0.1.263	15.0.1.223	2017.05.19

New functionality

1. Reports Enhancements on the Administration and Monitoring Console

Now the general operators report settings contain a new option that allows you to add batch additional information to the layout of the report.

Selected **batch details** check box added *Batch name* and *Page count* columns to the layout of the general operators report. *Batch name* column displays a name of batch which operator worked with. *Page count* column displays total number of pages at the batch. By default, the check box is not selected.

A new *Work time* column added to the layout of the general operators report. It displays a users' working time for the selected stage. For scanning and rescanning stages a dash will be displayed at this column.

For site productivity, processing productivity and general operators reports added ability to build reports for scanning, rescanning and custom stages.

The latest reports' settings are saved for each user individually now.

2. Saving Document Data and Page Text for Custom Verification Client

Added ability to save document data and page text for custom verification client using new methods in scripts.

```
IPage.SaveXmlTextToFile( filename ); // saves full page text in xml to the given file
```

```
IPage.SaveXmlTextToFileStorage(); // saves full page text in xml to the Filestorage
```

```
IDocument.SaveXmlToFile( filename ); // saves document xml to the given file
```

```
IDocument.SaveXmlToFileStorage(); // saves document xml to Filestorage
```

Bug fix

Issue description
Problems on thick verification station occurred working with custom verification stages from different batch types.
When connecting Data Set to external database, the columns of type float have wrong values in FlexiCapture that prevented PO Matching functionality from proper working.
One batch could not be split to several tasks to be processed in parallel, now it is fixed.
Report contained incorrect info about verified fields and fixed errors if the document passed through a several verification stages.
Completed tasks count equaled to zero in general operators report for batches processed on the web verification custom stage with processed stage at the end.
The number of completed tasks doubled for batches processed on the web verification custom stage with processed at the end.
Information about completed tasks was equal to zero for scanning and rescanning stages.
A dash is now be displayed in unused columns for scanning stage in general operators report.
Reports' settings were not saved by the system.
Reports' settings were not saved for other interval.
In certain workflow completed tasks were equal to zero for verification stage in general operators report.
Incorrect title was displayed for processing productivity report page.
Report title and page title were mixed up for site productivity report.
When printing forms created in FormDesigner populated with the data form database, the printed values was not correct, because each line left its mark in the property "Tip" of the filling element.
Incorrect information was displayed in the Help > About in the This project is licensed to... section.
