

Release Notes

ABBYY Vantage connector for PEGA

Version: 1.0

Release date: December 2022

Introduction

The ABBYY Vantage connector for PEGA is a connector for the PEGA platform. Developers can use this connector to add data extraction and document classification functionality to PEGA applications and workflows.

ABBYY Vantage is a cloud-based document processing solution that provides optical recognition, document classification, and data extraction functionality.

Features

The connector enables PEGA developers to use ABBYY Vantage to process documents in transactions.

The following skills can be used:

- Document Skills
- Classification Skills
- OCR Skill
- Processing Skill

Facilitate Manual Review scenarios by publishing the ABBYY Vantage Manual Review links to PEGA.

Mapping fields from ABBYY Vantage to PEGA cases.

Authenticate via OAuth 2.0 following the “Resource Owner Password Credential” mechanism of Vantage.

Use and modify a sample PEGA application demonstrating how to use Vantage within a PEGA environment.

Installation

Please review the User Guide for the installation procedure.

Known issues

Reference	Description
CONN-2912	Authorization fails when the Vantage tenant is configured to use SSO

Limitations

- Registration and file parameters are not supported in this release.
- The connector does not provide an activity to delete transactions
- The sample application is limited to one documented per transaction. The user can reconfigure the sample application to support multiple files per transaction.

Supported Versions

PEGA 8.7

PEGA Cloud 8.8.0

PEGA Cloud 8.7.4
